Markus Drösser
Center of Excellence AI
Santander Consumer Bank AG

Mönchengladbach, 30 October 2026

Internal Application: Senior AI Engineer, Center of Excellence AI (w/m/d)

Dear Mr. Drösser,

I am applying for the Senior AI Engineer position within the Center of Excellence AI.

My background combines 14+ years of IT experience, 7+ years in cloud, and current experience designing secure, governed cloud platforms within Santander. My strongest professional foundation is in Azure architecture, Kubernetes, Terraform, CI/CD, cloud networking, identity, security, observability and regulated enterprise delivery.

Over the last period, I have also been developing hands-on experience in Generative AI architecture, particularly around LLMs, Retrieval-Augmented Generation, embeddings, vector search, local model execution and secure AI platform design. Through portfolio and engineering lab work, I have been exploring how these AI capabilities can be integrated with enterprise-grade cloud foundations, including Kubernetes, workload identity, private networking, Key Vault, Infrastructure as Code, CI/CD, observability and cost governance.

What interests me most about this role is the combination of AI engineering and enterprise architecture. In a regulated banking environment, building an AI solution is not only about selecting a model or creating a prompt. It also requires careful decisions around data access, identity, security, model governance, auditability, networking, observability, scalability, latency and cost. This is where my existing cloud and platform background can add value.

In my current work, I already operate in an environment where security, compliance, resilience and governance are fundamental design constraints. I am used to translating architecture standards into reusable platform controls through Terraform, Azure Policy and CI/CD, and to working across platform, security, networking and application teams. I see these capabilities as directly transferable to production AI platforms and LLMOps environments.

I am particularly motivated by the opportunity to contribute to Santander's AI capability from within the organisation, combining my knowledge of the bank's technical and regulatory environment with my growing hands-on work in LLM, RAG and AI platform engineering.

I would welcome the opportunity to discuss how my cloud architecture and platform engineering experience, together with my focused development in Generative AI, could contribute to the Center of Excellence AI.

Kind regards,

Gowrisha C. Vishwa Kumar
